SARGENT FLETCHER INC.

Lockheed Martin F-16 Block 60 Aircraft Includes Sargent Fletcher

Sargent Fletcher Inc. announced today the award of a contract from Lockheed Martin to design, develop, and manufacture a new pneumatic rack system for the F-16 Block 60 program. Sargent Fletcher designed, developed, tested, and now manufactures the BRU-47Pn pneumatic rack system, which incorporates pneumatic-based technology for F-15 aircraft. Pneumatic technology offers lower maintenance costs as compared to current pyrotechnic equipment.

“Pneumatic weapon carriage and release systems are key parts of our core business,” said Frank Garcia, the Sargent Fletcher Director of Business Development. “With the continued production of the F-16 and future Joint Strike Fighter production, Sargent Fletcher expects to retain its position as the world leader in aircraft pneumatic weapon release equipment for decades to come.”

Terms of the two-year contract were not disclosed.
